PROJECT

BIPF - Kanya Express (ERP Application)

The BIPF ERP Application - Village Girl Health Tracker is a project aimed at enhancing the functionality of the existing BIPF ERP system by integrating a comprehensive health tracking module specifically tailored for village girls. The project focuses on developing a module that enables the addition of health records for village girls, particularly their hemoglobin (Hb) levels, and presents this data in a graphical view within the ERP system.

Key Features:

1. **Health Record Addition:** Implement functionality to add health records for village girls into the BIPF ERP system, including their hemoglobin levels.
2. **Graphical Representation:** Develop a graphical view within the ERP system to present the health data, specifically focusing on the hemoglobin levels, in an easily understandable format.
3. **Session Management:** Integrate session management capabilities to organize health records based on session timings, allowing for efficient tracking and analysis.
4. **Customizable Filters:** Implement filters to allow users to customize the data displayed in the graph view based on parameters such as age, location, or specific time periods.

Technologies Used:

- **Programming Languages:** PHP, JavaScript
- **Frameworks:** CodeIgniter
- **Database:** MySQL

IIG FarmFresh

E-Commerce Web Application

Language : Laravel 9, Ajax, JQuery, JavaScript, MySql, HTML, CSS, BootStrap.

IIG Farmfresh's main goal is to grow organic vegetables and handle tasks like managing tax details, customers, orders, transactions, and payments. This project focuses on organizing information about vegetables and stocks. Only the administrator has access to this application, which aims to minimize manual work.

The features of this system :

- Order vegetable online
- Stock Management
- Admin Module Management
- generates invoice
- Login with Otp.
